

1 **ABSTRACT**

2 A stylus user interface for a computer system having a display is disclosed.
3 The user interface receives stylus-based user input. Responsive to receiving the
4 user input, the user interface displays a menu that includes selectable items. By
5 selecting one of the selectable items, the user directs the computer system to
6 generate right-mouse button input or to interpret one or more subsequent stylus-
7 based user inputs as hover cursor input, keyboard-like input, or handwriting input.
